

Cerakote

Cerakote Firearm Coatings for Ferret

The Military Airmesco Ferret is now finished with the state-of-the-art Cerakote to make the system even more durable. Traditionally a firearms coating, it will extend the longevity of the Ferret even further, in the harshest of environments.

Cerakote is a coating that is hard and protective, making it scratch resistant against abrasions such as being dropped or impacted. It enhances the physical performance properties including abrasion/wear resistance, corrosion resistance, chemical resistance, impact strength and hardness. It attracts much less in terms of dust, dirt and other particles and is an effective barrier against oxidation and corrosion, especially useful for extremely hot and dusty climates.

This will have a huge benefit to our naval customers and those using the system in desert conditions.

Along with our latest developments; F701C Ferret, chamber expanding brush, new range of cleaning fluids, enhanced safety couplings and the distribution brush, the Airmesco Bore Cleaning System continues to lead the way in Automated Barrel Cleaning Systems from 20mm up to 203mm for all NATO, non-NATO, chromed, smooth or rifled weapons including mortars and launchers. Fully codified and certificated with over 20 years of exclusive use within the British and US Forces, amongst many others.
